

# Windows Setup Guide

Version 2.x

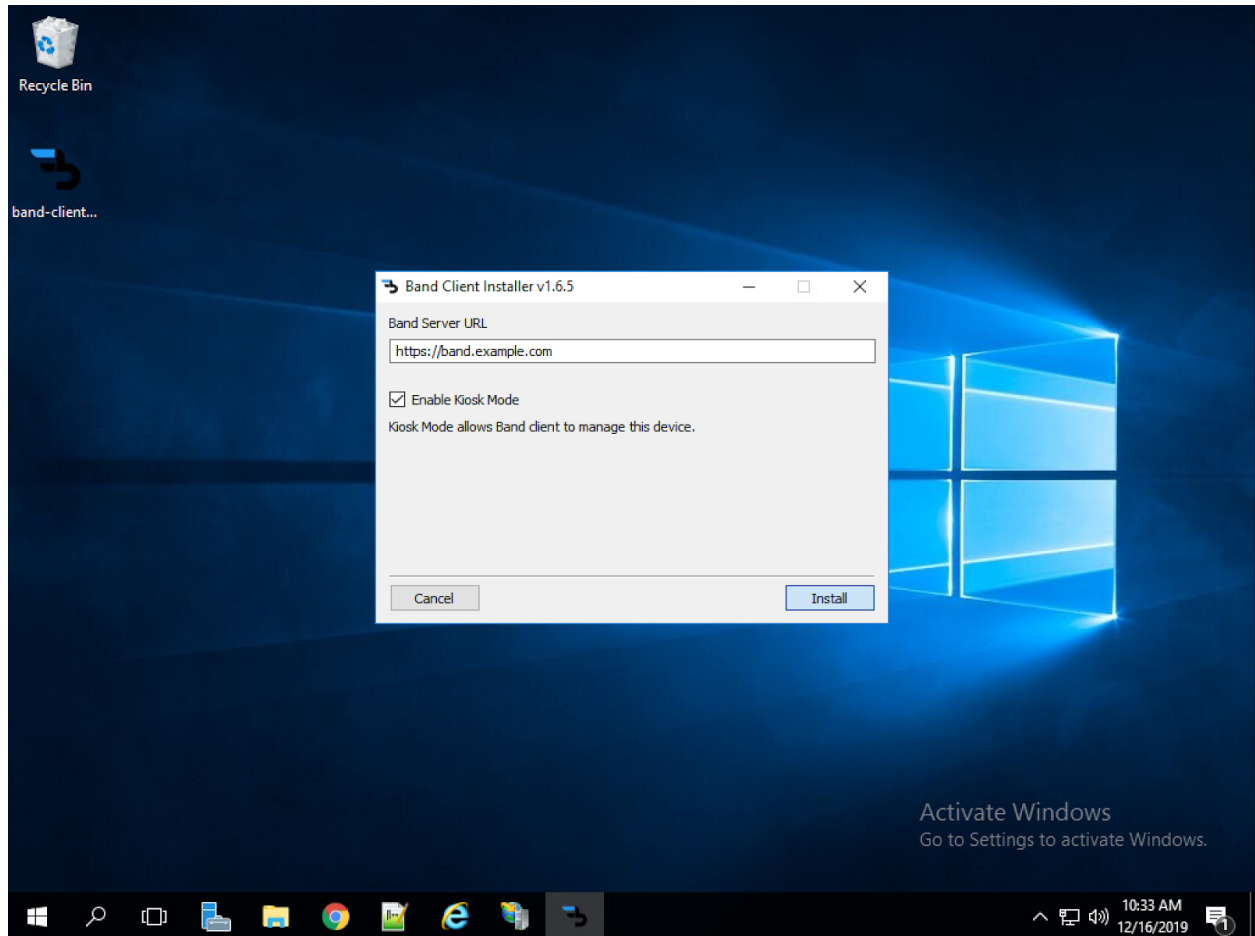

**Step 1:** Locate the Band Client Installer file. Right click on the installer and select **Run as administrator**.

**Step 2:** Enter the Band Server URL. If Band is located at band.example.com, enter **https://band.example.com**. If this is a kiosk, click **Enable Kiosk Mode**.

Click **Install**.

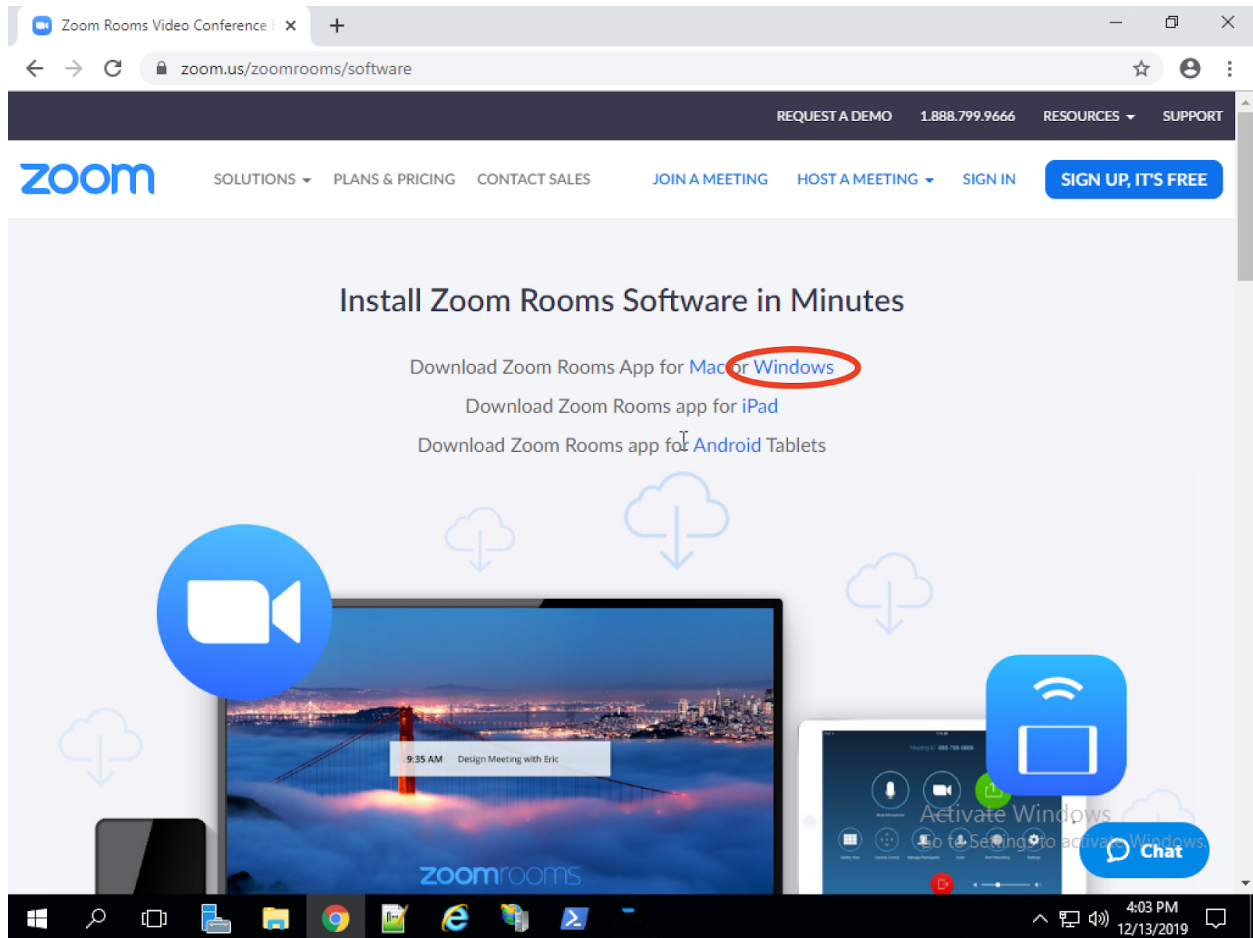

Once the installer completes, the device will restart. Upon restart, a chrome window will be launched with the Band server URL entered.

## Zoom Rooms Integration

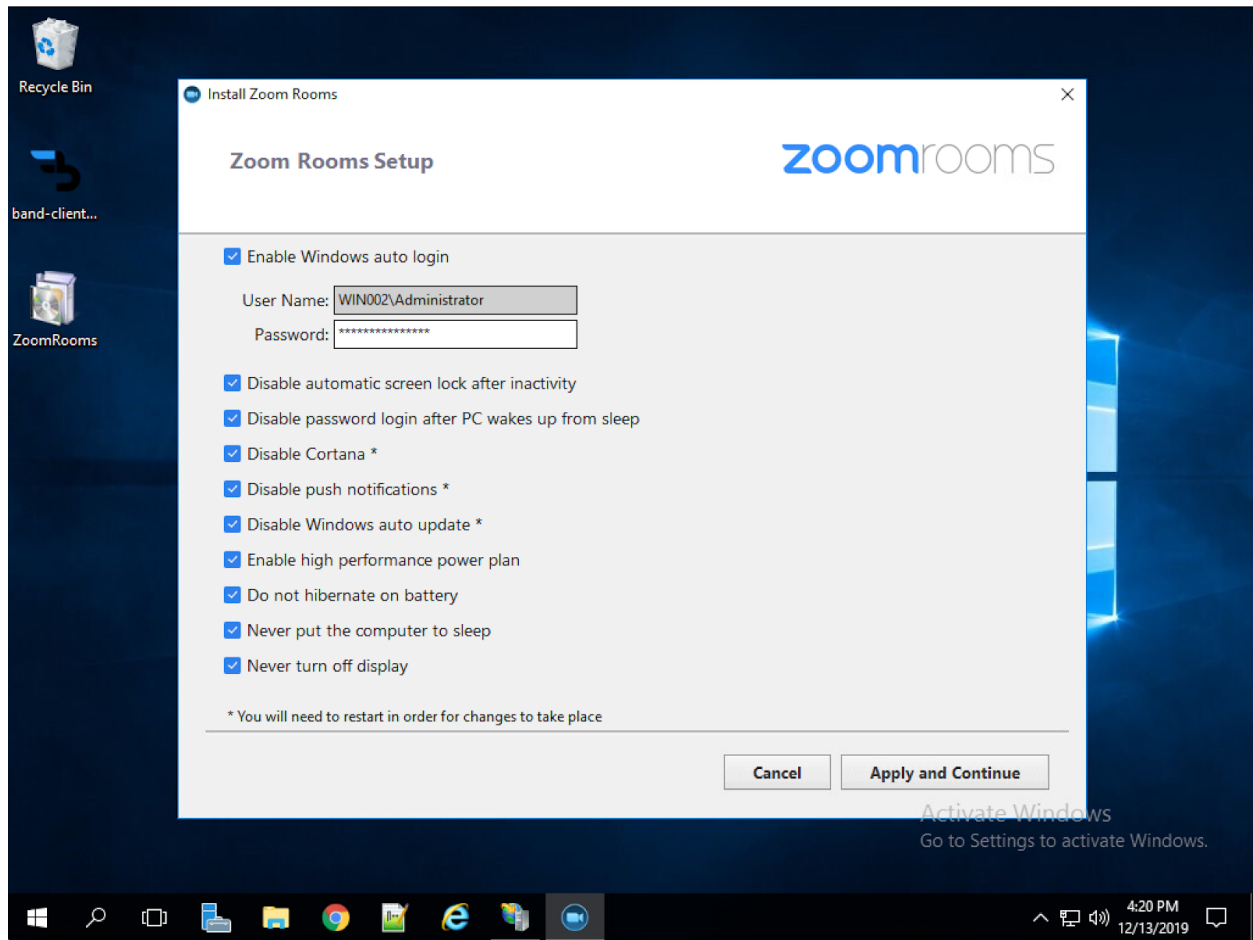

To get started on the Zoom Room integration, first download the **Zoom Rooms App for Windows** at the following website:

<https://zoom.us/zoomrooms/software>

Run the Zoom Rooms installer and follow the on-screen instructions to complete the installation.

For the best possible experience while using Zoom Rooms with Band, please make sure all options are checked in the screenshot below:

Once the Zoom Room is registered with your Zoom account, it will be ready to use with Band.

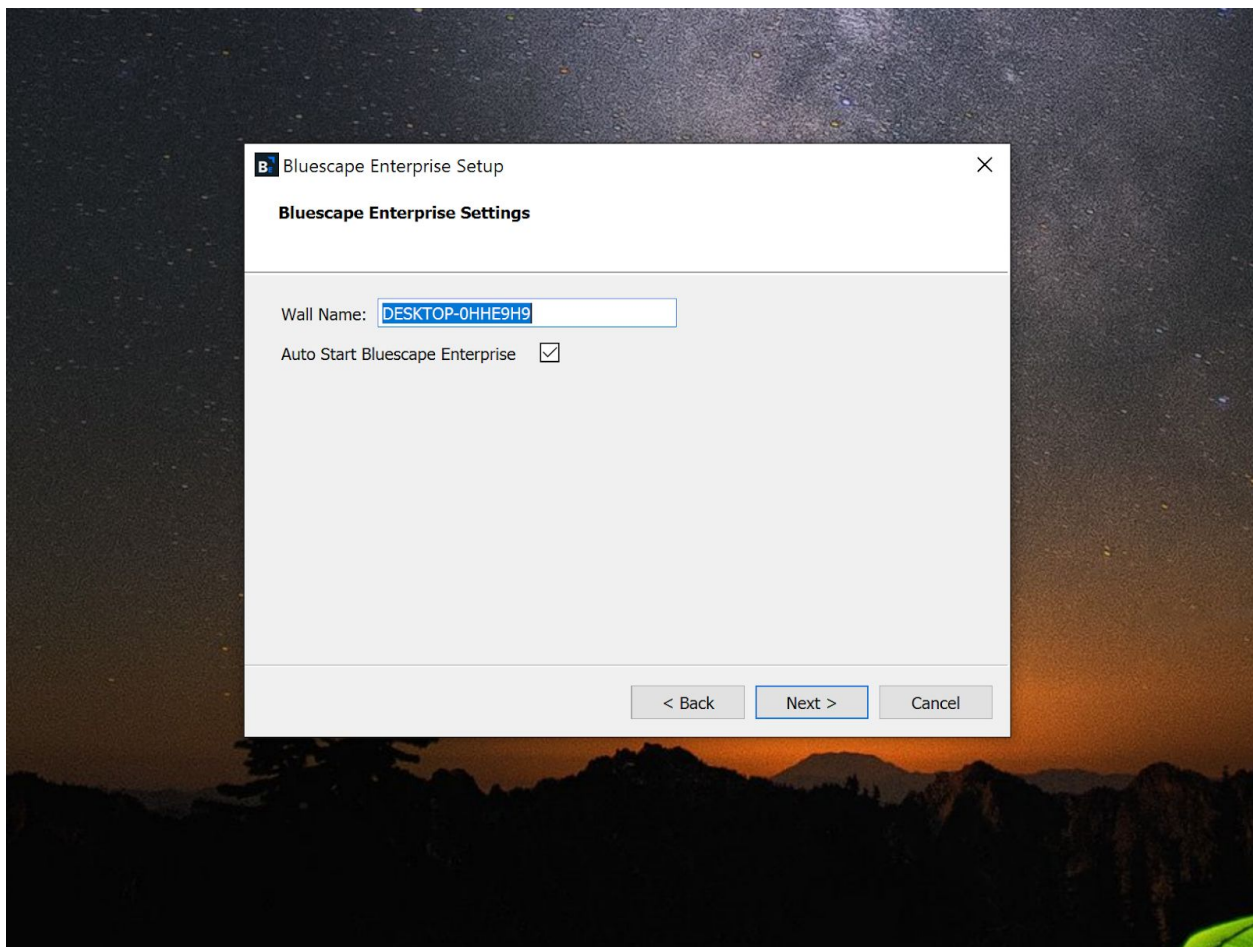

## Bluescape Integration

To get started on the Bluescape integration, download the Bluescape Enterprise software at the following link:

<https://create.bluescape.com/bluescape-enterprise-activation>

Run the installer and follow the on-screen instructions to get Bluescape Enterprise installed. If additional installation docs are needed, please refer to the Bluescape Enterprise Wall Client for Windows Installation Guide document.

For the best possible experience while using Bluescape Enterprise with Band, please make sure the **Auto Start Bluescape Enterprise** checkbox is ticked while installing Bluescape.

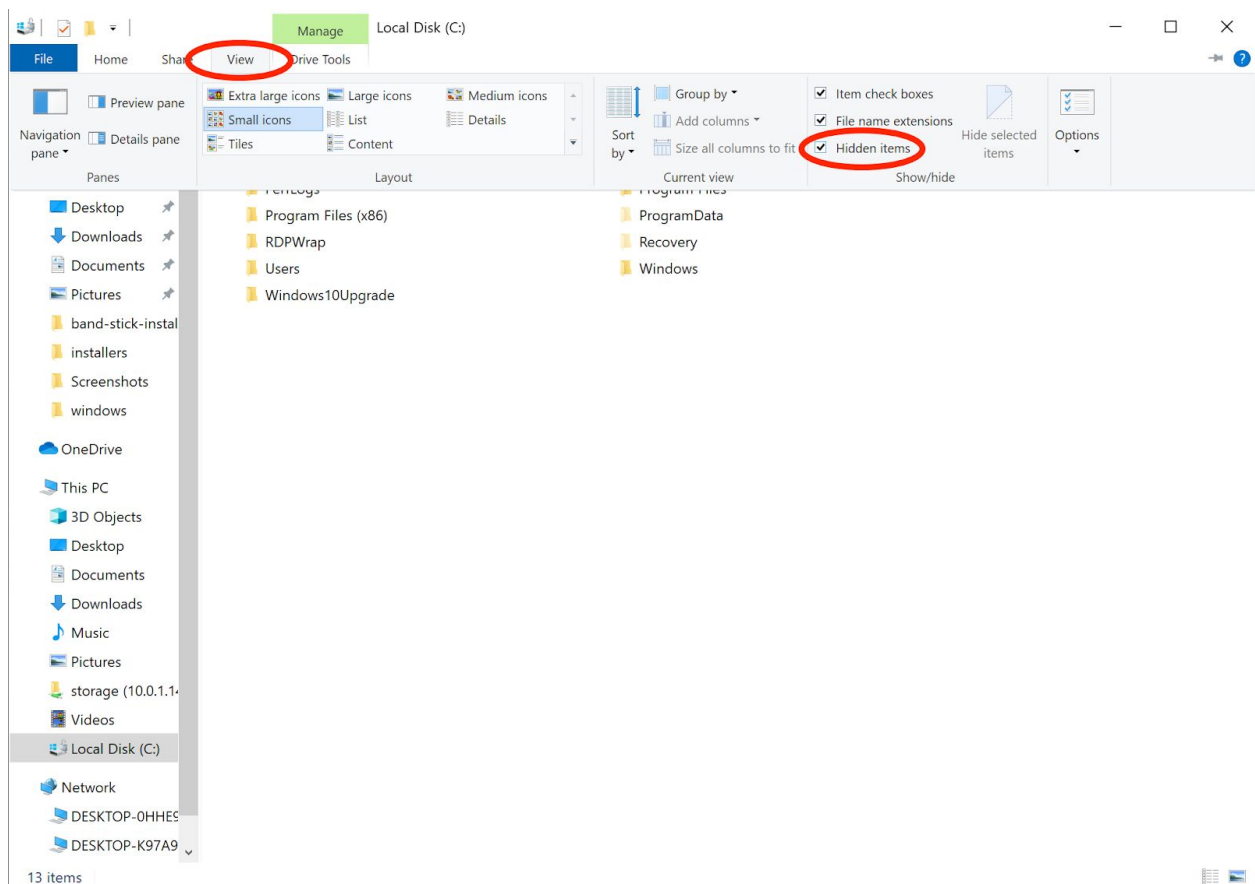

## Bluescape Local Configuration

Once the Bluescape Enterprise application has been installed, we must add a local configuration file for Bluescape to work best with Band.

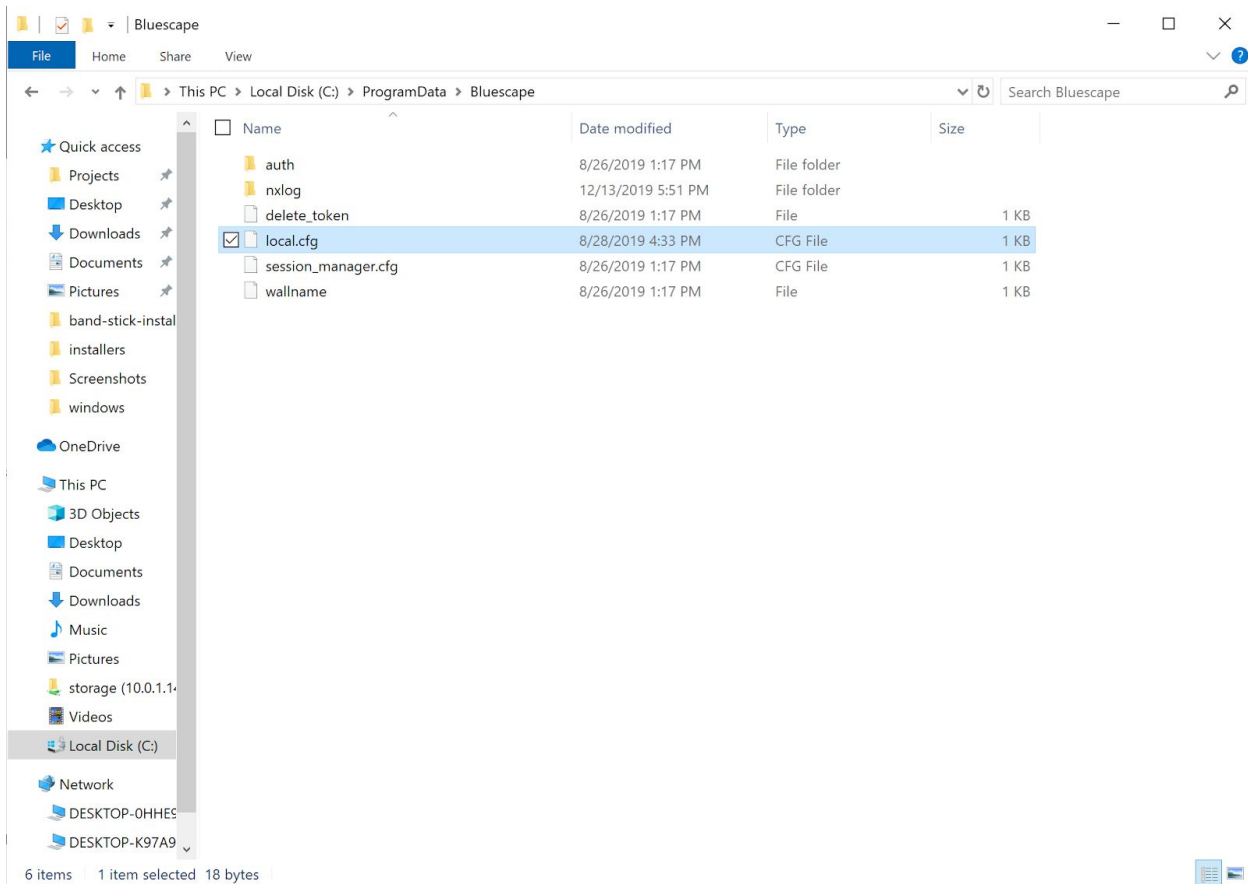

Navigate to the base drive that Bluescape was installed to. If Bluescape was installed to the C: drive, navigate to the C: drive in windows explorer.

If you can see a folder called ProgramData, click into ProgramData and skip the next step. If not, please follow the next step to show hidden files.

Click **View** at the top of the windows explorer window. On the right side, check the box named **Hidden items** to show hidden items.

In ProgramData, navigate into the Bluescape folder. If there is a file called **local.cfg**, open the file in an editor. If not, create a new CFG file and name it **local.cfg**.

In your editor, add the following line on a new line:

```
fullscreen = false
```

Save the file, and restart the Bluescape application. This local configuration will help avoid issues with the Band integration.
